Subject: Pesticide products you analyzed for PFOS

Dear Dr. Lasee,

I read your most recent publication of “Targeted analysis and Total Oxidizable Precursor assay of several insecticides for PFAS” with great interest. It is a very significant publication. Our office is very interested in pursuing further of this issue of possible PFAS in pesticide products. I wonder if you can provide us some information on the pesticide products you tested in this paper, such as names, lot #? Any information you provided will remain confidential and will not be revealed to outside parties without your explicit permission.

Is it possible that you send us an aliquot of the pesticide products you tested and found PFAS?

Many thanks for your help.

Yaorong Qian
